

SannaLMS - Team Onboarding & Git Workflow Guide

Repository: <https://github.com/Bhuvan23-A/SannaLMS>

1. Clone & Fetch All Branches

Open your terminal, navigate to your workspace folder, and run:

```
git clone https://github.com/Bhuvan23-A/SannaLMS.git
cd SannaLMS
git fetch --all
```

2. Checkout Assigned Branch

- Member 1 (DevOps, Auth & Identity)

```
git checkout part1/infra-auth-identity
```

- Member 2 (LMS Core, Content & Realtime)

```
git checkout part2/core-lms-content-chat
```

- Member 3 (Assessment & Coding Sandbox)

```
git checkout part3/assessment-coding-sandbox
```

- Member 4 (AI, Analytics & Placements)

```
git checkout part4/ai-analytics-placements
```

3. Daily Workflow (Syncing & Pushing)

Before starting work each day, pull the latest changes from 'develop' into your branch, then push strictly to your assigned branch:

```
# 1. Sync shared updates from develop into your working branch
git pull origin develop

# 2. Make changes strictly inside your assigned directory...

# 3. Stage, commit, and push ONLY to your assigned branch
git add .
git commit -m "feat(service-name): add new feature"
git push origin <YOUR_ASSIGNED_BRANCH>
```

4. Merging Code & Pull Requests

When a part milestone or feature is complete:

1. Go to GitHub (<https://github.com/Bhuvan23-A/SannaLMS>).
2. Create a Pull Request (PR) with target branch set to 'develop'.
3. CI/CD GitHub Actions workflows will automatically test your changes.
4. Once reviewed and approved by a teammate, merge your PR into 'develop'.
